

YASIR SALMAN

Full-Stack Application Developer | Mobile, Web, Backend & Internal Tooling

Raleigh, NC | yasirsalman.cs@gmail.com | 919-986-4805

PROFESSIONAL SUMMARY

Full-stack application developer and Computer Science graduate building production mobile, web, backend, and internal tooling systems. Develops multi-tenant SaaS workflows, secure APIs, role-based access, database/storage architecture, deployment pipelines, and automation tools that reduce manual operations. Experienced with React Native/Expo, Next.js, TypeScript, Node.js/Express, Supabase/PostgreSQL, Python, SharePoint-connected workflows, and end-to-end debugging from prototype through release.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL, Java, C++
Frontend/Mobile	React Native, Expo, Next.js, React, Vite, Tailwind CSS, HTML, CSS, Ionic Web Components
Backend/Data	Node.js, Express, REST APIs, Supabase, PostgreSQL, Authentication, Row-Level Security, private storage, signed URLs
Automation/Tools	Python scripting, Excel/CSV automation, SharePoint/OneDrive workflows, Git, GitHub, Fork, Render, Netlify, Expo EAS, TestFlight, VS Code, GitLab, Confluence
Core Strengths	Full-stack SDLC, multi-tenant architecture, RBAC, API integration, admin dashboards, data validation, production debugging, deployment workflows, internal tooling

PROFESSIONAL EXPERIENCE

Full-Stack Application Developer | Exceed Safety, Raleigh, NC

Oct 2025 - Present

- Led full-stack development of ExCert, a multi-tenant certification and training platform with iOS/Android access and a browser-based portal for employees, supervisors, clients, and company owners.
- Built React Native/Expo mobile screens and Next.js/Tailwind web interfaces for people management, certification records, company/client settings, dashboards, document uploads, reporting, and administrative workflows.
- Designed and maintained Node.js/Express APIs backed by Supabase/PostgreSQL for authentication, password reset/OTP flows, role permissions, Supabase RLS, private storage buckets, signed file access, and secure backend validation.
- Implemented multi-company data separation with company owner, supervisor, and employee access rules, supporting onboarding, invitation flows, profile management, active/inactive people logic, and email synchronization.
- Built certification workflows for expiration tracking, certificate/document uploads, Excel/CSV import validation, notification/reminder workflows, searchable dashboards, and deployment through Render, Expo EAS, and TestFlight.
- Developed company/client configuration tools for branding, role-based settings, private profile/certification files, signed URL retrieval, and admin-level data management across web and mobile usage.
- Translated client and business requirements into release-ready screens, APIs, validation rules, permission checks, and database structures while keeping mobile and web behavior aligned.
- Hardened document handling with private storage paths, upload flows, signed URL retrieval, and permission-aware access for profile images, certificates, and supporting files.
- Coordinated production readiness across Render backend deployment, Expo EAS builds, TestFlight distribution, environment configuration, smoke testing, and release troubleshooting.
- Managed full development cycles across requirements gathering, architecture decisions, database/schema updates, API integration, testing, debugging, source control, deployment, and production support.

SELECTED APPLICATION PROJECTS

ExCourse / Attendance & Course Completion System | React, Vite, Supabase, Netlify, SharePoint

- Delivered internal course-completion tooling for student sign-in, required signature capture, browser geolocation, timestamps, admin review, certificate/wallet-card downloads, class information exports, and SharePoint archiving.
- Implemented attendance record storage, signature previews, location accuracy review, duplicate/invalid record removal, and admin-facing documentation actions.
- Supported class-record workflows from student check-in through final documentation, export, and archive steps.

OSHA Lead Automation Tool | Python, Excel/CSV Automation

- Automated prospect research by filtering OSHA/company search results, excluding government/union targets, extracting company and mailing details, separating review records, and generating organized Excel lead sheets.
- Converted repetitive public-data research into structured business-development files with clear filtering, review, and export workflows.
- Structured outputs for quick review by separating qualified leads, exceptions, and records needing manual verification.

TableTop Tracker | Retool Team Application | Spring 2026

- Collaborated on a Retool app for tracking tabletop/card games, players, invitations, rounds, scores, and game history across structured match workflows.
- Contributed UI structure, application pages, feature planning, stage-based scoring flows, and debugging around match-state reliability.

MealCraft / Meal Prep System | Software Engineering Web Project | Aug 2025 - Dec 2025

- Built a meal-prep SPA for logging meals, tracking calories/macros, setting goals, creating meal plans, and viewing progress.
- Used JavaScript, Ionic Web Components, localStorage persistence, reusable components, hash routing, GitLab version control, agile practices, and Confluence documentation.

EDUCATION

Bachelor of Science in Computer Science | East Carolina University, Greenville, NC | Graduated Dec 2025

Relevant Coursework: Software Engineering I & II, Database Management, Data Structures, Design & Analysis of Algorithms, Operating Systems, Computer Networks, Computer Architecture, Organization of Programming Languages, Automata and Formal Languages, Cloud Computing, Ethics in Computing.
